

Milestone 1

Description:

The app that I will be working on for Project 3 is my Gas Tracker app. I will be adding in functionality to connect the app to Backendless, to make it so a user can log in and their data will be stored in the cloud, this way if a user were to get a new phone they wouldn't lose all of the data they had on their old phone. The only screen that I will be needing to add is a log in screen.

Data needed:

The data that I will be needing for my project is all user based still but now can be stored in the cloud.
